

SecureWorks

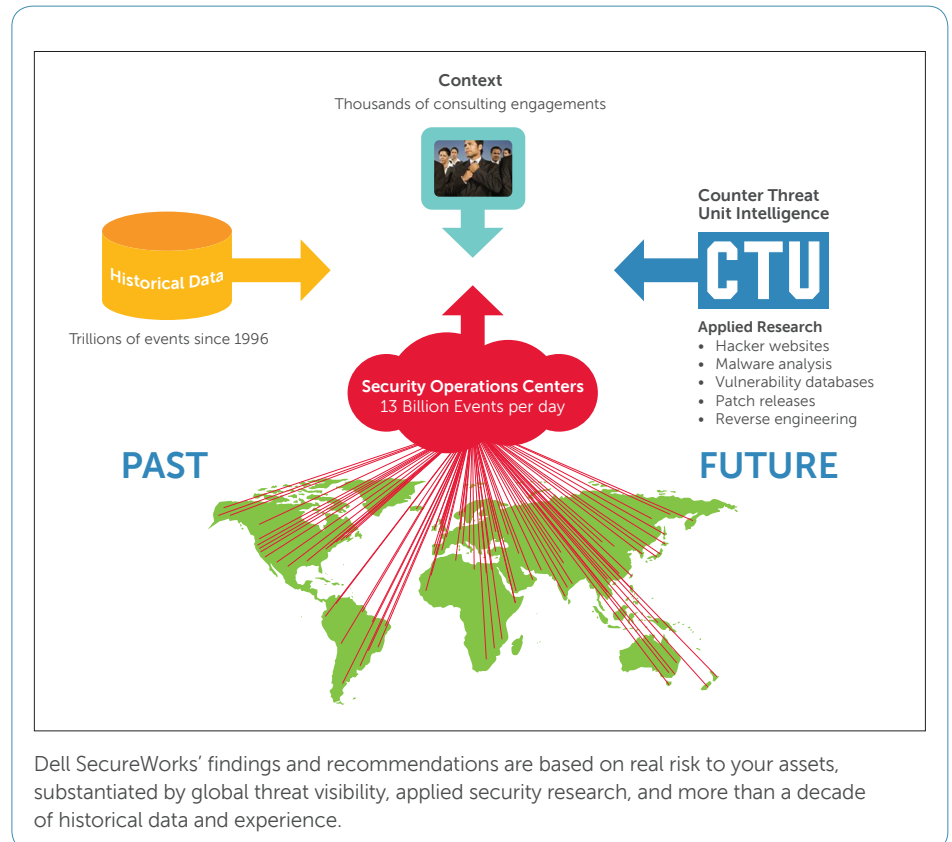

Security and Risk Consulting (SRC)

Why Dell SecureWorks Consulting?

- Exclusively focused on Security Services
- True understanding of risk, based on applied research and data from thousands of clients worldwide
- More than 12 years of security and compliance experience
- Jargon-free findings and recommendations
- 12 months of ongoing support at no additional cost

Security. Service. Experts.

Dell SecureWorks is focused on protecting our customers' digital assets against cyberthreats. We do that with intelligent defenses that combine our proprietary technology, global threat visibility and recognized expertise. That's why we are trusted in 70 countries by thousands of customers. Dell SecureWorks offers a full suite of Managed Security, Counter Threat Unit Intelligence and Security and Risk Consulting services.

Dell SecureWorks' findings and recommendations are based on real risk to your assets, substantiated by global threat visibility, applied security research, and more than a decade of historical data and experience.

Understanding the real risks

Effectively managing security risk requires a true understanding of the threats and vulnerabilities faced by your organization. Without this, many risks are overemphasized while others are understated – resulting in poor risk management. As a leading provider of Information Security Services, Dell SecureWorks has a true understanding of real risk that is supported by concrete, substantiated threat and vulnerability information from:

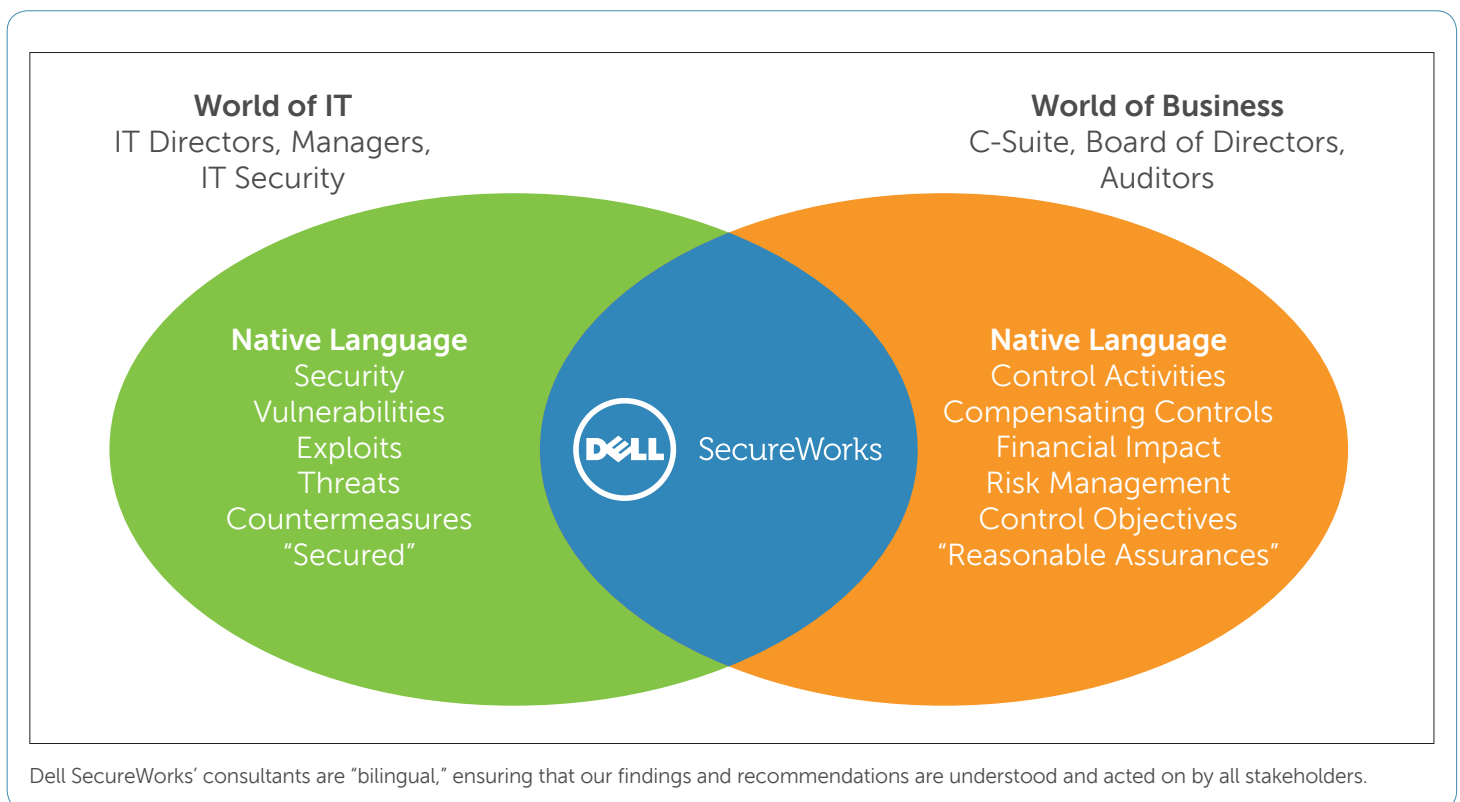

- Processing billions of security events every day
- Protecting thousands of customers worldwide
- More than 12 years of historical attack data and trends
- Dell SecureWorks' Counter Threat UnitSM (CTU) applied security research
- Deep relationships with key security groups and research communities
- Performing thousands of consulting engagements

With this unique insight into the security landscape, Dell SecureWorks provides guidance and recommendations to customers based on **real, not theoretical, risk to their assets**. As a result, our customers are able to manage and reduce risk to their business effectively.

Understand all findings and recommendations

A strong understanding of engagement findings and recommendations enables you to address the risks to your organization effectively. Security engagements often span multiple organizational groups and involve stakeholders outside of security and IT staff who do not understand the "native language" of IT security.

Dell SecureWorks understands this and provides jargon-free communication that is easily understood by nontechnical business leaders and auditors. Our consultants are "bilingual" and provide their findings and recommendations in language appropriate for all stakeholders, ensuring that risks are understood and properly addressed. Additionally, our consultants provide ongoing support for 12 months to address any questions you have at no additional cost.

Premier security and audit professionals

When recruiting and training consultants, Dell SecureWorks' first priority is security expertise. Members of our SRC team are passionate about security and have diverse security backgrounds such as military, government, law enforcement, R&D and private industry. All of our consultants are also trained and experienced in audit, providing a solid understanding of control design and architecture. Our consultants are premier professionals and are among the most technically proficient in the industry, with broad and deep skill sets as well as a wide array of security certifications including:

- CISSP (Certified Information Systems Security Professional)
- CISA (Certified Information System Auditor)
- GSEC (GIAC Security Essentials Certification)
- GCIA (GIAC Certified Intrusion Analyst)
- GCIH (GIAC Certified Incident Handler)
- CEH (Certified Ethical Hacker)
- PCI QSA (Payment Card Industry Qualified Security Assessor)
- And many others

Trust the results

Every organization is unique, and Dell SecureWorks realizes that "one size does NOT fit all" when it comes to consulting engagements. Our expert consultants work closely with you and openly communicate before, during and after an engagement to answer any questions and ensure that we completely address your needs. Constant dialogue also allows for better knowledge transfer to your staff, allowing them to learn from our consultants' activities.

Our SRC consultants evaluate your security controls and provide expert guidance – not just identify weak points. Dell SecureWorks maintains a constant dialogue with you during an engagement, ensuring that our findings are well communicated and that you are not taken by surprise by the findings in our final deliverables. We seek to provide a balanced assessment of your security and compliance posture, including areas in which your organization excels and areas in which your organization falls short of best practices or regulatory requirements. When final reports are delivered, you can trust that our findings and recommendations are accurate and well suited to your organization.

"Dell SecureWorks' assessment of our systems was more accurate than our previous ones. They have a good structure for their audits, and we especially liked their exiting of the risk assessment with a presentation for management."

Marshall Bissonnette, Systems Engineer
Big Rivers Electric Corporation

Services overview

Compliance and certification

Dell SecureWorks' Compliance and Certification Services facilitate your PCI, GLBA, FFIEC, HIPAA, SOX and NERC CIP compliance efforts and help you prepare for your next audit. Dell SecureWorks can also perform the required certification audits for PCI and credit bureaus.

Program development and governance

Dell SecureWorks' Program Development and Governance Services help you establish, review, and improve your corporate information security program and policies, based upon best practices and guidance from regulations and standards.

Incident response services

Dell SecureWorks provides a full spectrum of Incident Response Services from planning and analysis to emergency response and forensics. When a breach happens, Dell SecureWorks can help you minimize damage, recover compromised data and preserve evidence for legal action.

Architecture and integration

Our experts provide a comprehensive assortment of Architecture Services, working with you to review your security architecture, develop standards and recommend improvements for your entire IT infrastructure or for specific segments and areas of your environment.

Testing and assessments

Our experts can work with you to test and assess your policies, processes and technologies to identify weaknesses, categorize risks and recommend improvements. Our Testing and Assessment services help to fortify your IT security while improving your compliance with industry regulations.

Residency services

Serving as members of your staff, either on-site or remotely, our expert consultants fill gaps or extend your internal resources.
