

## DATA SHEET

# Leveraging AI to Automate Vulnerability Management

Secureworks modern vulnerability management solution is built to maximize vulnerability risk reduction while leveraging machine learning to minimize the manual burden on infosec and IT operations teams.

Unlike legacy VM products that have delivered precious little innovation in the past decade, Secureworks offers:

## A Fully Integrated, Comprehensive Solution

Secureworks' solution includes the following elements of a complete VM program:

- Asset Discovery
- Built-In, Outlier Asset Identification Using ML
- Machine and Connected Device Scanning
- Integrated Web Application Security Testing
- Secureworks' Exclusive, ML-Driven, Contextual Prioritization
- Remediation Planning and Risk-Reduction Scenario Reporting

## Self-Learning, ML-driven Performance Improvement

As a machine-learning (ML)-based platform, Secureworks is designed to improve its performance as it collects data. Further, as a SaaS platform, Secureworks can leverage data collected not just from Customer 1 for the benefit of Customer 1, but from all Secureworks customers using the product. So, Customer 1 benefits not only from the activities of Customer 1, but also from the activities of Customers 2, 3, 4...n.

## Built-in, Meaningful Contextual Prioritization

Perhaps the most compelling element of Secureworks' offering is its exclusive Contextual Prioritization. No other VM solution on the market delivers a prioritization capability that understands the asset's operational context, accounts for the unique characteristics of the enterprise's network, and yields a vulnerability risk score unique to each network... and even unique to the same vulnerability on different parts of the network. Taegis™ VDR leverages over 40 internal and external factors to yield a meaningful prioritized list of vulnerabilities, so your team knows what to fix first, and what can wait.

### About Secureworks

Secureworks® (NASDAQ: SCWX) is a global cybersecurity leader that protects customer progress with Secureworks® Taegis™, a cloud-native security analytics platform built on 20+ years of real-world threat intelligence and research, improving customers' ability to detect advanced threats, streamline and collaborate on investigations, and automate the right actions.

## An Automated, Configuration-Free Approach to VM

Existing VM products require substantial upfront configuration, as well as ongoing manual intervention. Since its founding, Secureworks' corporate objective has been the automation of as much of the VM process as possible, providing customers substantial TCO savings in time and resources.
