

SOLUTION BRIEF

# Mimecast Email Security Data Integrated with Taegis<sup>™</sup> XDR

Enabling security teams to respond faster to email threats and improve overall cyber resilience.

According to the FBI's IC3, as of 2020 phishing is by far the most common attack performed by cybercriminals. Email continues to be the most prolific attack vector and the primary focus of most incident response efforts. Thus, extended visibility into email security and the associated data is critical for every organization's security strategy and practices.

By integrating Mimecast email security data with Secureworks Taegis XDR, organizations can realize the full benefit of their investments and improve their organization's overall cyber resilience.

Secureworks Taegis XDR is an extended detection and response solution that helps security teams prevent, detect and respond to advanced threats with automation, machine learningdriven analytics and comprehensive threat intelligence. Combining data from diverse security solutions and leveraging hundreds of 3rd party integrations, Taegis XDR delivers comprehensive visibility of threat activity across your enterprise.

Mimecast's cloud-based Secure Email Gateway protects organizations and employees using any cloud or on-premises email platform. It defends against inbound spear-phishing, malware, spam and zero-day attacks by combining innovative applications and policies with multiple detection engines and intelligence feeds.

#### The power of Mimecast plus Taegis XDR allows companies to:

- Improve email visibility and rapidly respond to email security threats
- More efficiently operate with fewer skilled resources

Customers can now easily add the Mimecast email security integration with Taegis XDR to improve overall investigations effectiveness and operational efficiency:

- Simplifies investigations and improves the efficacy of threat detections so organizations can respond with confidence
- Provides centralized threat detection in Taegis XDR with added email log data
- Enables joint customers to facilitate correlation of email security data with endpoint, network and other cloud security data for threat hunting, detection and response
- Email security data is automatically ingested reducing the need to manually stich data together

### How Mimecast Data Strengthens Taegis XDR Investigations

Mimecast email security data can be quickly exposed during an active investigation. When examining alerts and events in Secureworks Taegis XDR, investigations can be used to gather and compile related information to seamlessly share with others on the investigations team. Mimecast data on email threats can be revealed by using advanced search queries. And, linking saved search queries to an investigation adds additional context and facilitates easier hand-offs between analysts, improving the overall investigation workflow.

The Taegis XDR-Mimecast integration provides the user with the ability to perform advanced queries for emails using Mimecast's query language, for example, searching for specific emails, or finding free text in emails in the Mimecast account.

The integration with Mimecast email security feeds additional data and context into the Taegis XDR Email Watchlist detector. The Email Watchlist detector collects and normalizes email events and converts them into an alert with an assigned severity and confidence based on the activity observed.

By integrating Mimecast email security data with Secureworks Taegis XDR, joint customers can leverage the full benefits of their investments while improving their organization's overall cyber resilience against the most widely used attack vectors. For organizations without a SOC or enough skilled analysts, Secureworks can manage the solution for you with Secureworks Taegis ManagedXDR.

## Secureworks

### How It Works

- Emails received by Mimecast are passed through a series of hygiene and advanced security scanning techniques, to ensure that they are safe before delivery to the recipient.
- Malicious and unwanted emails are blocked and detailed information is provided for further analysis.
- Email intelligence provided by Mimecast is sent to Secureworks Taegis XDR platform for normalization.
- Secureworks Taegis XDR uses the email intelligence to alert analysts and add context to data from other Secureworks Taegis XDR data sources.
